

Assessing

Assessing

THE ACCESSORY MADE FOR THE ASSESSOR

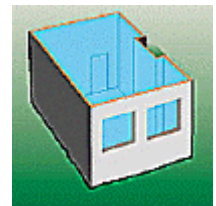

For assessors: Super-rapid assessment of enclosed spaces or living areas is often sought. A quick overall view of the level of stock without carrying out expensive and complicated procedures is desired.

Area and volume determination is typically made through a number of observations and applied through formulas. This can be a time-consuming and costly activity. The entire process can now be completed in half the time without pen, paper or calculator.

Unlike sonar-based devices, the DISTO D5 and D8 allow you to see the exact point you are measuring to, and instantaneous mistake-free recorded observations are possible.

Only with the laser of the DISTO D5 and D8 is it possible to measure so elegantly and professionally across and beyond the pile of goods. Structural observations and dimension checks are extremely easy, there's no climbing involved and so no risk of falling.

With the DISTO D5 and D8 you can work alone, and yet twice as fast as with conventional procedures. Your DISTO will have paid for itself after the first two or three jobs.
