Painting

AREAS & VOLUMES IN A MATTER OF SECONDS

Eliminate the more inconvenient tasks associated with internal dimension measurement. The inefficient manner in which these tasks were once carried out can now be a thing of the past. Imagine eliminating backache as the result of continuous stooping for measurements; reducing time spent measuring to a third of the time.

Suppose as a plumber, heating engineer or fireplace builder you walk into a building, and within a few minutes determine the exact area, volume size and length of all necessary piping. Increase your professional image, quote within a few minutes save time

Imagine having on board memory and functionality that eliminates the need for pen and paper calculations. Incorrect calculations and area estimations can cost you money, measure areas in a few seconds with mm accuracy.

Painters often work on particular sites where the non-contact acquisition of data is essential, and must avoid damaging any existing structures. Reduce time constraint pressures by measuring faster and easier with the DISTO.

In addition boost the image of your professionalism. Cut your job time to a half. At \$25 per hour, this would mean a saving of \$100 per day.

Boost your image,
productivity and
level of
professionalism with
the DISTO.
